

At Wadsworth Fields Primary School, we follow the Power Maths progression and the White

Rose maths progression. This allows us to access schemes that follow the National Curriculum and provide quality resources to ensure staff can provide high quality provision for our children.

The policy below is from Power Maths, the representations are similar to those used in White Rose as well.

## Power Maths calculation policy, KS1

The following pages show the *Power Maths* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

## **KEY STAGE 1**

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

**Key language:** whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

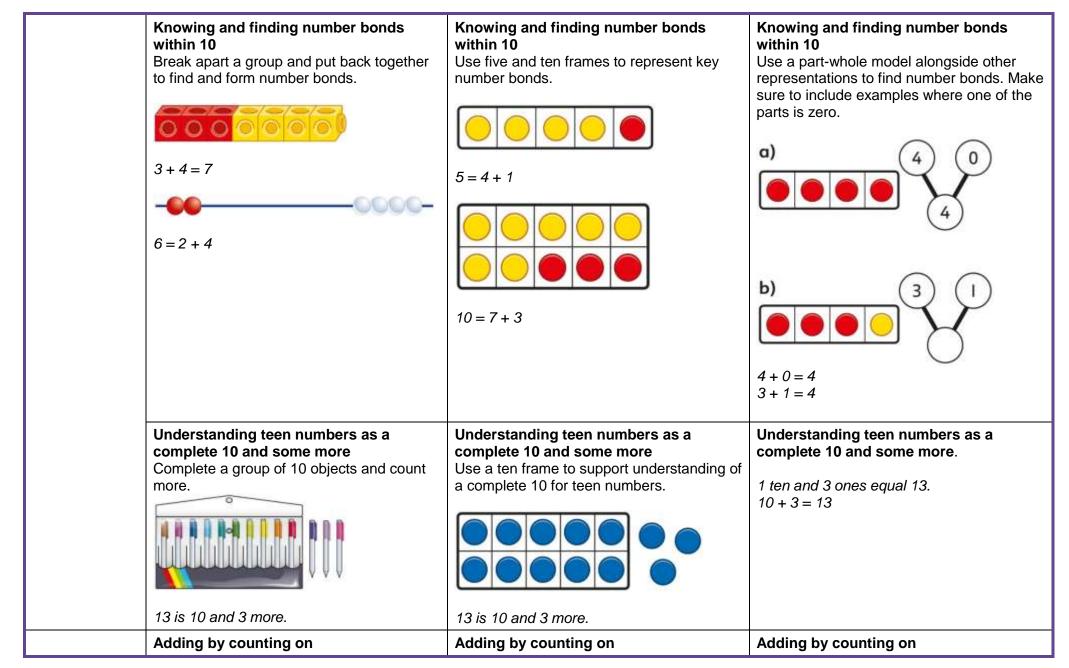

| Addition and subtraction: Children first learn to<br>connect addition and subtraction with counting,<br>but they soon develop two very important skills:<br>an understanding of parts and wholes, and an<br>understanding of unitising 10s, to develop efficient<br>and effective calculation strategies based on<br>known number bonds and an increasing<br>awareness of place value. Addition and<br>subtraction are taught in a way that is interlinked<br>to highlight the link between the two operations.<br>A key idea is that children will select methods and<br>approaches based on their number sense. For<br>example, in Year 1, when faced with 15 – 3 and<br>15 – 13, they will adapt their ways of approaching<br>the calculation appropriately. The teaching should<br>always emphasise the importance of<br>mathematical thinking to ensure accuracy and<br>flexibility of approach, and the importance of using<br>known number facts to harness their recall of<br>bonds within 20 to support both addition and<br>subtraction methods.<br>In Year 2, they will start to see calculations<br>presented in a column format, although this is not<br>expected to be formalised until KS2. We show the<br>column method in Year 2 as an option; teachers<br>may not wish to include it until Year 3. | <ul> <li>multiplication and division.</li> <li>They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation.</li> <li>In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations.</li> <li>Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are</li> </ul> | Fractions: In Year 1, children encounter halves<br>and quarters, and link this with their understanding<br>of sharing. They experience key spatial<br>representations of these fractions, and learn to<br>recognise examples and non-examples, based on<br>their awareness of equal parts of a whole.<br>In Year 2, they develop an awareness of unit<br>fractions and experience non-unit fractions, and<br>they learn to write them and read them in the<br>common format of numerator and denominator. |

|--|--|--|---|
| Equal groups<br>and repeated<br>addition                                       | Recognise equal groups and write as<br>repeated addition and as multiplication.      | Recognise equal groups using standard<br>objects such as counters and write as<br>repeated addition and multiplication.  | Use a number line and write as repeated<br>addition and as multiplication.<br>$\begin{array}{c} & & \\ & & \\ & & \\ & & \\ 0 & 5 & 10 & 15 \\ & & \\ & 5+5+5=15 \\ & & \\ & 3\times5=15 \end{array}$ |
| Using arrays to<br>represent<br>multiplication<br>and support<br>understanding | Understand the relationship between<br>arrays, multiplication and repeated addition. | Understand the relationship between<br>arrays, multiplication and repeated addition.   | Understand the relationship between arrays,<br>multiplication and repeated addition.<br>$\begin{array}{c} & & \\ & & \\ \hline \\ 0 & 5 & 10 & 15 & 20 & 25 \\ \hline \\ 5 \times 5 = 25 \end{array}$ |
| Understanding<br>commutativity   | Use arrays to visualise commutativity.   | Form arrays using counters to visualise<br>commutativity. Rotate the array to show that<br>orientation does not change the<br>multiplication.<br>This is 2 groups of 6 and also 6 groups of 2. | Use arrays to visualise commutativity.<br>$4+4+4+4+4=20$ $5+5+5+5=20$ $4 \times 5 = 20 \text{ and } 5 \times 4 = 20$  |

| Grouping<br>equally                               | Understand how to make equal groups from a whole.                       | Understand the relationship between grouping and the division statements.                            | Understand how to relate division by grouping to repeated subtraction.  |
|---|---|--|---|
|   | <u></u>   | $12 \div 3 = 4$  |   |
|   | 8 divided into 4 equal groups.<br>There are 2 in each group.            | $12 \div 4 = 3$  | 0 1 2 3 4 5 6 7 8 9 10 11 12  |
|   |   | 12 ÷ 6 = 2   | There are 4 groups now.   |
|   |   |  | 12 divided into groups of 3.<br>12 $\div$ 3 = 4   |
|   |   |  | There are 4 groups.   |
| Using known<br>times-tables to<br>solve divisions | Understand the relationship between multiplication facts and division.  | Link equal grouping with repeated<br>subtraction and known times-table facts to<br>support division. | Relate times-table knowledge directly to division.  |
|   |   | 40  divided by 4 is 10.  | $I \times 10 = 10$ $2 \times 10 = 20$ $3 \times 10 = 30$ $4 \times 10 = 40$ $5 \times 10 = 50$ $6 \times 10 = 60$ $7 \times 10 = 70$ $8 \times 10 = 80$ $I \text{ used the 10 times-table to help me.}$ $3 \times 10 = 30.$ |
|   | <i>4</i> groups of 5 cars is 20 cars in total.<br>20 divided by 4 is 5. | of the link between times-table knowledge<br>and division.   | I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3.  |
|   |   | 60<br>60   | $3 \times 10 = 30$ so $30 \div 10 = 3$  |
